

## SOLAR POWERED LOW SPEED VEHICLES

**Sarasota, FL--** Cruise Car, Inc. of is pleased to be offering our customers the state of the art solar energy. We are excited about our relationship with Suntech and want you to know what you have to sell.

Our partners in China have established a Chinese-Australian joint venture known as Suntech Co. Ltd. They specialize in research, development, manufacturing and sales of crystalline silicon solar cells, modules and PV powered products. The technology and quality of the products developed has exceeded the highly advanced international level. The products are so popular all over the world that the majority of their sales are exported at 90% of total company production. In the domestic market Suntech products are widely used in communications, broadcasting, telecommunications, transportation, grid-connected systems, stand-alone systems, water-pumping, lighting, military operations and so on. The company has actively participated in the Chinese Western Brightness Program to explore BIPV technology continuously.

Together **Cruise Car** and our partners in China are entering the second phase with Suntech to cultivate the domestic PV industry chain and preparing for a large scale development.

Suntech Limited has become one of the important international solar PV power industry manufacturers. According to the Sarasin Basic Report in November 2004, Suntech silicon solar cell production capacity was in the top ten in the world.

Finally, Suntech is accelerating its commercialization research on the second generation Poly-crystalline thin film solar cell, which will keep Suntech ahead of the PV power industry. All this simply guarantees that the solar products you sell from **Cruise Car** is the state of the art and you can be sure of excellent performance and reliability.
